

Cochrane Master Builders

Process Page Style Guide Template + Service-Specific How-To

Anti-Gravity Process UX for a Family-Owned Builders' Network

1. Purpose Of This Process Page Style Guide

This document defines the **master process-page style guide** for Cochrane Master Builders and every specialist service website under the Masters ecosystem.

The process page is one of the most important conversion pages in the entire website system.

Most contractor websites tell people what they offer.

A world-class process page tells people what will happen next, why it matters, what information is needed, what can affect cost, how the company protects the home, and how the customer moves from uncertainty into a clear scope conversation.

For Cochrane Master Builders, the process page must do three things:

1. **Reduce fear.** Construction buyers worry about hidden costs, vague communication, messy work, poor sequencing, delays, permits, and contractor reliability.
2. **Create confidence.** The visitor should feel that the company is organized, local, family-owned, careful, and serious.
3. **Move the visitor to contact.** The process page should make the next step feel simple, safe, and logical.

The master conversion goal is:

Request A Clear Estimate

The emotional goal is:

I understand how this company works, and I feel safe enough to reach out.

2. The Anti-Gravity Process Principle

The process page should remove mental weight.

The customer arrives with questions:

- What happens after I submit the form?
- Will someone pressure me?
- Will they ask the right questions?
- Can they give me a rough range?
- Will they respect my home?
- What if the job changes?
- Do I need permits?
- Do I need photos?
- Will they clean up?
- Will I know what is happening during the work?

The process page should answer those questions before the customer has to ask.

Anti-Gravity Rule

****Every step should make the homeowner feel lighter, safer, and more oriented.****

Do not make the process page feel like a corporate policy manual.

Do not make it sound like a legal disclaimer.

Do not make it look like a generic six-step contractor timeline.

Make it feel like a calm builder walking the homeowner through exactly what happens next.

3. Strategic Job Of The Process Page

The process page is not just informational.

It is a sales asset.

But it sells through clarity, not pressure.

The Page Must Prove

- This company has a system.
- The customer will not be left guessing.
- Pricing is approached responsibly.
- The home will be respected.
- The work will be planned before it starts.
- The project will be routed to the right service path.
- The company thinks long-term.

- The next step is easy.

The Page Must Avoid

- vague phrases like “we make it easy” without showing how
- fake guarantees
- overly technical project management jargon
- random icons with no substance
- too many steps
- service process copy that does not change by service
- cluttered timelines
- hard-sell CTAs

4. Process Page Brand Standard

The controlling idea is:

****Old-school accountability made usable through modern-day clarity.****

The process page should make family-owned trust visible through structure.

It should communicate:

- “Our name matters here.”
- “We plan before we build.”
- “We explain what affects the cost.”
- “We respect your home.”
- “We document the next step.”
- “We want to be the builder you call again.”

The process page should connect back to the master line:

****Strong Foundations For Those Who Come After Us.****

But it should do that practically.

Example:

“Strong foundations do not begin when the tools come out. They begin with a clear scope, honest expectations, and a process that protects the home before the work starts.”

5. Master Process Page Structure

Use this as the base structure for every master and service-specific process page.

Recommended Section Order

1. Trust Bar
2. Navbar
3. Process Hero
4. Fast Answer Block
5. Why Our Process Matters
6. Full Process Timeline
7. What We Need From You
8. What Can Affect Price And Timeline
9. How We Protect Your Home
10. Service-Specific Process Details
11. Communication And Change Handling
12. Proof / Process Examples
13. FAQs About The Process
14. Final CTA
15. Footer

This order follows the customer's internal journey:

1. "Am I in the right place?"
2. "Will this be organized?"
3. "What happens first?"
4. "What will they need from me?"
5. "What could change the cost?"
6. "Will they respect my home?"
7. "How does this apply to my specific project?"
8. "What if something changes?"
9. "Do I feel safe enough to contact them?"

Part One: Global Process Page Style Guide

6. Process Page Visual Direction

Visual Feeling

The process page should feel like a premium project briefing.

It should be calm, structured, and useful.

It should not feel like a flashy animation page.

Recommended Visual Keywords

- blueprint clarity
- builder's notebook
- architectural timeline
- warm office consultation
- measured steps
- calm guidance
- practical planning
- project clarity
- family-owned accountability

Material Direction

Use a restrained construction-inspired palette:

- warm off-white
- soft stone
- blueprint blue-grey
- muted forest green
- charcoal steel
- light concrete
- warm timber accent
- subtle brass highlight

Texture Direction

Use subtle textures only:

- paper grain
- blueprint grid lines
- concrete wash
- wood grain accents
- fine line dividers

Avoid loud textures, heavy backgrounds, fake grunge, or busy construction-site visuals.

7. Process Page Typography

Typography Goal

The page should feel readable, mature, and precise.

H1 Style

Large, confident, calm.

Use strong sentence-case headlines.

Example:

****A Clear Process For Better Construction Decisions.****

H2 Style

Section headings should feel practical and helpful.

Example:

****What Happens After You Reach Out****

Body Copy Style

Short paragraphs.

No dense walls of text.

The copy should read like a builder explaining the project at a kitchen table.

Label Style

Use small labels for step numbers, categories, and helpful notes.

Examples:

- Step 01
- Before We Quote
- During The Work
- After Completion

- Price Driver
- Home Protection Note

8. Process Page Layout System

Layout Rule

Use a strong grid.

The process page should feel organized even before the visitor reads it.

Recommended Patterns

- split hero with copy and process card
- vertical timeline for mobile
- horizontal timeline only where it remains readable
- sticky side index on desktop for long pages
- process cards with clear step numbers
- calm accordion sections for detailed explanations
- comparison cards for “unclear contractor experience vs. clear builder process”

Whitespace

Use generous spacing.

Construction decisions feel stressful. The layout should not feel crowded.

CTA Placement

Use CTAs in three places:

1. Above the fold
2. After the process timeline
3. Final CTA

Do not place a loud CTA after every paragraph.

9. Process Page Motion And Interaction

Motion Feeling

Motion should feel like clarity unfolding.

Use:

- soft fade-in
- subtle upward reveal
- timeline progress indicator
- accordion expansion
- gentle card hover
- checkmark confirmation states

Avoid:

- scroll hijacking
- bouncing icons
- heavy parallax
- autoplay video above the fold
- loading animations that slow the page
- flashy effects that make the process feel less serious

Interaction Ideas

- “See What We Need From You” expandable checklist
- “What affects price?” accordion
- “Choose your project type” service-specific process selector
- “Upload photos first” CTA card
- sticky “Request Estimate” button after scroll

Performance Rule

Motion must never hurt Core Web Vitals.

Use transform and opacity only.

Respect reduced-motion settings.

10. Process Page Copy Voice

Voice Formula

****Plainspoken + Reassuring + Specific + Local + Action-Oriented****

Good Copy Example

“You do not need to have everything figured out before reaching out. Send us what you know, and we will help you understand whether the next step is a photo review, site visit, scope discussion, or project estimate.”

Bad Copy Example

“We make your dream project seamless from start to finish with unmatched excellence.”

Copy Must Do

- explain what happens next
- reduce fear
- mention scope clarity
- acknowledge pricing variables
- show respect for the home
- make contacting feel easy
- avoid fake certainty

Part Two: Section-By-Section Process Page Template

11. Section 1 — Trust Bar

Purpose

Ground the page in local family-owned trust.

Style

Small bar above navbar.

Warm neutral background.

Quiet assurance, not promo banner.

Copy Template

****Family-owned construction services for Cochrane homes, acreages, and surrounding communities.****

Service-specific version:

****Family-owned [service] in Cochrane, planned clearly before work begins.****

12. Section 2 — Process Hero

Purpose

Tell the visitor exactly what this page does.

The hero should make the process feel safe, not complicated.

Layout

Left side:

- eyebrow
- H1
- subheadline
- primary CTA
- secondary CTA
- microcopy

Right side:

- process snapshot card
- mini step preview
- optional service-specific visual

Eyebrow Template

****The Cochrane Master Builders Process****

Service-specific:

****Our [Service] Process In Cochrane****

H1 Options

****A Clear Process For Better Construction Decisions.****

****From First Message To Final Walkthrough, You'll Know What Happens Next.****

****No Guesswork. No Pressure. Just A Clear Path Forward.****

Service-specific:

****A Clear Process For Your [Service] Project.****

Hero Subheadline Template

****Construction feels easier when the next step is clear. Our process is built to help you understand the scope, rough range, timeline, project risks, and responsible path forward before work begins.****

Service-specific:

****Every [service] project has details that affect cost, timeline, and long-term performance. We help you understand the scope clearly before work begins, so you can make a confident decision.****

Primary CTA

****Request A Clear Estimate****

Service-specific:

****Request A [Service] Estimate****

Secondary CTA

****See What We Need From You****

Hero Microcopy

****No pressure. Send what you know, and we will help you understand the best next step.****

13. Section 3 — Fast Answer Block

Purpose

Answer the page's purpose immediately for humans, Google, and AI search.

Style

Use a calm answer card under the hero.

Copy Template

****Our process starts with your project details, photos or plans if available, and a clear scope review. From there, we help determine whether the next step is pricing guidance, a site visit, a permit-aware planning conversation, or a formal estimate. The goal is to reduce uncertainty before work begins.****

Service-specific:

****Our [service] process starts by reviewing your project details, location, timeline, and site conditions. We look at what can affect cost, what risks may matter, and what information is needed before we recommend the right next step.****

UX Rule

Keep this block between 50 and 90 words.

14. Section 4 — Why The Process Matters

Purpose

Teach the customer that a clear process protects them.

Style

Use a two-column section.

Left:

- story/explanation

Right:

- risk cards

H2 Template

****Good Construction Starts Before The Tools Come Out.****

Copy Template

****A strong project does not begin with a hammer. It begins with scope, planning, communication, and honest expectations. When those pieces are missing, the customer is left exposed to surprise costs, delays, miscommunication, permit issues, jobsite mess, and work that may not hold up later.****

****Our process is designed to protect the customer, the home, the budget conversation, and the long-term result.****

Risk Cards

- unclear scope
- surprise costs
- permit confusion
- poor sequencing
- hidden conditions
- messy work areas
- weak communication
- rushed decisions

UX Rule

Do not scare the customer excessively.

Use this section to create calm authority.

15. Section 5 — Full Process Timeline

Purpose

Show the exact path.

Style

Use premium timeline cards.

Desktop: horizontal or staggered vertical.

Mobile: vertical stepper.

H2 Template

****The Process, Step By Step.****

Intro Copy

****Every project is different, but the path should never feel vague. These are the core steps we use to move from first conversation to clear next action.****

Step 01 — Tell Us About The Project

****Send the basics: what you need, where the project is, your timeline, your rough budget if you have one, and any photos, plans, or measurements available.****

Step 02 — Scope Review

****We review the details to understand the project type, site conditions, service fit, likely price drivers, and whether more information is needed before quoting.****

Step 03 — Clear Guidance

****We explain the likely next step, which may be a photo review, site visit, pricing range, planning conversation, or formal estimate depending on the project.****

Step 04 — Estimate And Options

****You receive a clear scope direction with practical options, price guidance, timeline expectations, and notes about materials, access, permits, or trade dependencies where relevant.****

Step 05 — Schedule And Prepare

****Once the scope is approved, we confirm timing, access, preparation needs, communication expectations, and any details that should be handled before work begins.****

Step 06 — Build, Repair, Or Install

****The work is completed with respect for your property and attention to the details that affect long-term performance, not only the surface result.****

Step 07 — Walkthrough And Closeout

****We review the work, answer questions, discuss any maintenance notes, and make sure the project is properly closed out.****

Step 08 — Long-Term Relationship

****The goal is not only a completed job. The goal is to become the local builder you feel comfortable calling again.****

CTA After Timeline

****Start With Step One****

16. Section 6 — What We Need From You

Purpose

Make the customer feel ready to contact.

Style

Use a checklist grid.

H2 Template

****What Helps Us Give Better Guidance.****

Copy Template

****You do not need everything figured out before reaching out. But the more context you can provide, the more useful our first response can be.****

Checklist Items

- project address or community
- service needed
- photos or video
- measurements if available
- timeline
- budget range
- known issues
- access concerns
- inspiration or finish preferences

- plans, permits, or drawings if available

Microcopy

****Photos are especially helpful for repairs, exterior work, finished surfaces, drainage issues, access, and site conditions.****

CTA

****Send Project Details****

17. Section 7 — What Can Affect Price And Timeline

Purpose

Pre-handle objections about cost and schedule.

Style

Use expandable cards.

H2 Template

****What Can Change The Price Or Timeline?****

Intro Copy

****Construction pricing is rarely one-size-fits-all. A responsible estimate should account for the details that can change the scope, cost, and timeline before work begins.****

Price Driver Cards

Size And Scope

****Larger spaces, multi-area work, or custom details require more time, labour, and materials.****

Existing Conditions

****Hidden damage, uneven surfaces, previous work, moisture, rot, poor framing, or structural issues can change the project path.****

Access

****Tight access, stairs, steep sites, parking limits, acreage access, or difficult material staging can affect labour and scheduling.****

Materials And Finish Level

****Standard materials and premium finishes have different costs, lead times, and installation requirements.****

Permits And Licensed Trades

****Some projects may involve permits, inspections, electrical, plumbing, gas, HVAC, engineering, or other licensed trade coordination.****

Season And Weather

****Exterior projects can be affected by temperature, snow, rain, wind, curing conditions, and seasonal demand.****

Changes After Approval

****Changes can happen, but they should be documented clearly so cost and timeline expectations stay honest.****

CTA

****Get Pricing Guidance****

18. Section 8 — How We Protect Your Home

Purpose

Address domestic trust.

This is especially important for mothers, families, older homeowners, and anyone who has had bad contractor experiences.

Style

Use calm reassurance cards.

H2 Template

****Respect For The Home Is Part Of The Work.****

Copy Template

****Construction happens inside real homes, around real schedules, families, pets, neighbours, and routines. A good process should account for more than the task itself. It should protect the property and make the experience feel as controlled as possible.****

Protection Cards

- access expectations
- dust and debris planning where relevant
- floor and surface protection where relevant
- jobsite cleanup
- communication expectations
- child and pet awareness
- material staging
- neighbour consideration
- end-of-day safety

UX Rule

This section should feel deeply human, not like a checklist copied from a contractor brochure.

19. Section 9 — Service-Specific Process Details

Purpose

Make the generic process specific to the exact domain/service.

This is where each service website becomes unique.

H2 Template

****How The Process Changes For [Service].****

Copy Template

****The core process stays the same, but every service has details that deserve special attention. For [service], the most important planning factors are [specific factors]. We look at those early so the project is scoped properly before work begins.****

Component Options

- service-specific checklist
- “what we inspect first” card
- material / method decision card
- permit / code notes
- timeline expectation cards
- common hidden issue warning
- photo examples of what to send

UX Rule

This section must be different for each service category.

Do not publish identical process pages across all domains.

20. Section 10 — Communication And Change Handling

Purpose

Build trust around the fear of surprises.

H2 Template

****If Something Changes, It Should Be Explained Clearly.****

Copy Template

****Some projects reveal details after work begins. The standard is not to pretend that never happens. The standard is to communicate clearly, explain the issue, discuss options, and document changes before moving forward.****

Cards

- what we found
- why it matters
- what the options are
- how it affects price
- how it affects timeline
- what we recommend

UX Rule

This section increases trust because it admits reality without sounding chaotic.

21. Section 11 — Proof / Process Examples

Purpose

Show that the process is real.

Style

Use small case-story cards.

H2 Template

****What A Clear Process Looks Like In Practice.****

Project Story Template

****[Service] In [Community]****

Situation: [what the homeowner needed]

Process: [how the scope was reviewed]

Decision: [what was recommended]

Outcome: [what changed for the customer]

Proof Placeholder If No Projects Yet

****As projects are completed, this section should show real local examples with scope, photos, location, process notes, and finished outcomes.****

Rule

Do not fake proof.

Real proof beats polished filler.

22. Section 12 — Process FAQs

Purpose

Answer objections and increase SEO value.

H2 Template

****Questions Homeowners Ask About The Process.****

Universal FAQs

Do I need to know exactly what I want before contacting you?

****No. You can start with the basics: what you are trying to build, repair, replace, or improve. We will help you understand what information is needed next.****

Can you give a quote from photos?

****For some repairs and smaller projects, photos can help us provide early pricing guidance. Larger or more complex projects usually need measurements, a site review, or a deeper scope conversation.****

Why do you ask for a budget range?

****A budget range helps us recommend the right path. It does not lock you into anything. It helps us avoid suggesting options that do not fit the project reality.****

What happens after I submit the form?

****We review your details, determine the best next step, and follow up with questions, guidance, or a path toward an estimate.****

What if the project changes?

****If something changes, it should be explained and documented. Changes can affect cost or timeline, but they should not feel hidden or confusing.****

Do you handle permits?

****Some projects may involve permits or licensed trades. The process page should explain permit awareness without making legal promises. If permits appear relevant, the next step is to review the project and confirm requirements through the proper channels.****

23. Section 13 — Final CTA

Purpose

Convert after clarity has been built.

Style

Use a strong, calm CTA panel.

H2 Template

****Ready To Start With A Clear Next Step?****

Copy Template

****Tell us what you are planning, where the project is, and what timeline you are hoping for. We will help you understand the scope, rough range, and best next step before work begins.****

Primary CTA

****Request A Clear Estimate****

Service-specific:

****Request A [Service] Estimate****

Secondary CTA

****Call A Local Builder****

Microcopy

****No pressure. Just a clearer path forward.****

Part Three: How To Make The Process Page Match A Specific Domain Service Website

24. The Service Alignment Method

Every process page should start from the universal template, then adapt to the service.

Use this sequence.

Step 1 — Identify The Service's Core Customer Anxiety

Ask:

****What is the customer most afraid will go wrong with this service?****

Examples:

- Roofing: leaks, storm damage, insurance stress, winter failure.
- Bathrooms: water damage, bad tile, poor waterproofing, disruption.
- Concrete: cracking, drainage, frost heave, poor base prep.
- Basement suites: permit problems, illegal suite issues, bad layout, poor sound separation.
- Decks: structural safety, rot, code, railings, weather exposure.
- Flooring: uneven subfloor, poor installation, scratches, cheap material wear.
- Landscaping: drainage, dead plants, wasted budget, maintenance overload.
- Commercial: downtime, code, access, scheduling, customer disruption.

The process page should answer that anxiety directly.

Step 2 — Identify The Service's Hidden Work

Ask:

****What hidden work determines whether this project lasts?****

Examples:

- Roofing: flashing, ventilation, underlayment, ice and water protection.
- Bathrooms: waterproofing, slope, substrate, plumbing, ventilation.
- Concrete: excavation, base compaction, reinforcement, drainage, curing.
- Decks: footings, joist spacing, ledger attachment, flashing, railings.
- Flooring: subfloor prep, moisture barrier, acclimation, transitions.
- Siding: house wrap, flashing, moisture management, trim details.
- Windows: flashing, sealing, insulation, frame condition.
- Basements: egress, fire separation, sound control, moisture, ceiling height.

The process page should educate customers about this hidden work in simple language.

Step 3 — Identify The Best Starting CTA

Different services need different CTAs.

Use:

- **Request A Clear Estimate** for broad projects.
- **Send Photos For A First Look** for repairs and visible issues.
- **Request A Scope Review** for complex or technical work.
- **Plan Your [Service] Project** for larger/lifestyle work.
- **Ask About Permits** for permit-sensitive work.
- **Request An Assessment** for urgent or diagnostic categories.

Step 4 — Adjust The Process Timeline

The universal timeline stays stable, but each service gets special notes.

For example:

Roofing adds:

- roof inspection
- ventilation review
- material selection
- weather scheduling
- cleanup / magnet sweep

Bathroom adds:

- layout review
- waterproofing method
- plumbing/electrical coordination
- fixture selection
- tile sequencing

Concrete adds:

- site access review

- excavation/base prep
- forms/reinforcement
- pour timing
- curing

Basement suite adds:

- use-case planning
- permit awareness
- egress/fire separation
- layout/sound
- trade sequencing

Step 5 — Adjust The Visual Language

The process page should match the service page style.

Examples:

Roofing:

- storm-protection visuals
- charcoal/slate palette
- roofline diagrams
- inspection checklist

Bathroom:

- warm stone palette
- waterproofing cutaway visuals
- tile/fixture details
- calm interior imagery

Concrete:

- aggregate/concrete texture
- technical drawing lines
- base prep diagrams
- strong foundation imagery

Landscaping:

- outdoor daylight
- yard planning cards
- seasonal notes
- soft green/timber palette

Commercial:

- clean grid
- schedule timeline
- downtime planning cards
- sharper corporate tone

Step 6 — Add The Service-Specific Proof Module

Proof should match the service.

Examples:

Roofing proof:

- before/after roofline
- flashing detail
- damaged shingle repair
- cleanup photo

Bathroom proof:

- before/after bathroom
- waterproofing stage
- tile detail
- final vanity/shower

Concrete proof:

- excavation/base prep
- formwork
- pour day
- finished slab/driveway

Basement proof:

- unfinished space

- framing/rough-in
- drywall/finish
- final suite area

25. Service Category Process Page Adaptations

Part Four: Process Page Content System

26. Required Content Fields Per Process Page

Each service process page should be built from a config file.

Required Fields

- domainName
- brandName
- serviceName
- serviceCategory
- processHeroEyebrow
- processHeroHeadline
- processHeroSubheadline
- primaryCTA
- secondaryCTA
- fastAnswerBlock
- mainCustomerAnxiety
- hiddenWorkFactors
- universalProcessSteps
- serviceSpecificSteps
- whatWeNeedChecklist
- priceDrivers
- homeProtectionNotes
- changeHandlingCopy
- proofItems
- processFAQs
- finalCTACopy
- seoTitle
- metaDescription

27. Service Process Config Example

Example: Roofing

serviceName: Roofing

mainCustomerAnxiety: leaks, hidden water damage, storm damage, insurance stress, winter failure

hiddenWorkFactors: flashing, ventilation, underlayment, ice and water protection, roof deck condition

primaryCTA: Request A Roof Assessment

fastAnswerBlock:

****Our roofing process starts with understanding the roof concern, reviewing photos or inspection needs, and identifying whether the project is likely a repair, replacement, ventilation issue, flashing problem, or storm-related concern. From there, we explain the next step clearly before work begins.****

priceDrivers:

- roof size
- roof pitch
- access
- shingle or material type
- deck condition
- ventilation
- flashing complexity
- weather timing
- disposal

serviceSpecificSteps:

1. Roof concern intake
2. Photo review or inspection
3. Repair vs replacement guidance
4. Material and ventilation discussion
5. Estimate and scheduling
6. Installation / repair
7. Cleanup and final review

28. Process Page SEO Template

SEO Title Format

****Our [Service] Process In Cochrane | [Brand Name]****

Example:

****Our Roofing Process In Cochrane | Cochrane Roofing Masters****

Meta Description Format

****See how our family-owned [service] process works in Cochrane, from project intake and scope review to pricing guidance, scheduling, workmanship, and final walkthrough.****

H1 Format

****A Clear Process For Your [Service] Project.****

Internal Links

Every process page should link to:

- home
- services
- pricing
- service page
- areas we serve
- contact
- related service pages

Schema Notes

Use:

- BreadcrumbList
- Service schema where appropriate
- FAQPage schema for visible FAQs
- Organization / LocalBusiness on global pages

29. Process Page Microcopy System

Form Entry Microcopy

****You do not need to have every detail figured out. Send what you know, and we will help you understand the right next step.****

Photo Upload Microcopy

****Photos help us understand condition, access, materials, and scope before a site visit.****

Budget Field Microcopy

****A rough range helps us recommend the right path. It does not lock you in.****

Timeline Field Microcopy

****Tell us whether this is urgent, seasonal, or part of a longer-term plan.****

Success Message

****Thanks — your project details were sent. We will review the scope and follow up with the best next step.****

30. Process Page QA Checklist

Before publishing any process page, confirm:

1. Does the hero clearly explain the process and service?
2. Does the page reduce fear before asking for contact?
3. Does it explain what happens after inquiry?
4. Does it include what the company needs from the customer?
5. Does it explain what affects price and timeline?
6. Does it show how the home/property is protected?
7. Does it include service-specific process details?
8. Does it connect to the family-owned standard?
9. Does it include FAQs?
10. Does it include a clear CTA?
11. Does it avoid fake guarantees?
12. Does it avoid generic identical copy across services?
13. Does it load quickly on mobile?
14. Does it use accessible headings, buttons, and accordions?
15. Does it feel like guidance, not pressure?

31. Developer / Lovable Implementation Notes

Use this page system as a reusable process-page template.

Recommended Build Pattern

- One shared ProcessPage component.
- One process config file per service/domain.
- Shared sections with service-specific content injected.
- Shared design tokens for colour, spacing, type, and component states.
- Service-category variants for visuals and CTA language.

Component List

- ProcessHero
- FastAnswerBlock
- WhyProcessMatters
- ProcessTimeline
- WhatWeNeedChecklist
- PriceTimelineDrivers
- HomeProtectionGrid
- ServiceSpecificProcess
- ChangeHandlingSection
- ProcessProofCards
- ProcessFAQ
- FinalCTA

Performance Requirements

- Render critical hero and answer block immediately.
- Avoid heavy animation libraries.
- Lazy-load proof images and below-fold media.
- Use static content where possible.
- Use lightweight accordions.
- Keep layout stable.
- Respect reduced motion.

Accessibility Requirements

- Correct heading hierarchy.
- Buttons with descriptive labels.
- Keyboard-accessible accordions.
- Visible focus states.

- Alt text for process diagrams and images.
- High contrast text.
- No information conveyed by colour alone.

32. Final Process Page North Star

A good process page should make the customer think:

****They know what they are doing.****

****They will explain the price.****

****They will not pressure me.****

****They understand what can go wrong.****

****They will respect my home.****

****They think beyond the invoice.****

****I can contact them now.****

That is the standard.

The process page is not a timeline.

It is a trust-building tool.

It is the digital version of a calm builder sitting down with a homeowner and saying:

****Here is what happens next. Here is what can affect the work. Here is what we need from you. Here is how we protect your home. Here is how we move forward properly.****

That is how Cochrane Master Builders turns uncertainty into action.

****Strong Foundations For Those Who Come After Us.****
